23 October 2014

Cleaning Storm Water Drains at Madokero Estate

Storm water drains provide organized flow of water to prevent flooding of your gardens, homes, roads and other areas in any residential area. You would have noticed that in our estate, we have lined all storm water drains with concrete plaster to enhance the smooth and rapid flow of storm water in order to prevent flooding or undesirable water pools in roads, your homes and other areas.

However, as construction work has commenced, it has been discovered that a lot of waste material is being dumped in the storm water drains, and these could block the proper flow of storm water, risking flooding of roads, homes, gardens and water borne diseases.

It is against this background that we strongly implore you to take ownership of the cleaning of the storm water drains around your homes in order to maintain and protect the beauty of our estate. We also urge all those with damaged access culverts at their stands to have them repaired before the rain season commences.
